

This abstract is our effort to understand how the participant approaches the problem statement. We would therefore like to know:

1. Which language/library you will be using for image processing
2. How your code will work in successfully completing the problem statement. Include details of the image transformations and image operations that will be used. Also mention the sequence in which these operations will be executed in your code.
3. Please submit a code, in a language of your convenience, to identify the area and coordinates of all three circles from this picture. Also attach a screenshot of the output of this program.
